

Turning the World Upside Down

Threat Modeling a Constitution

Eleanor Saitta

@dymaxion

ToorCon Seattle 2011

Security and the Law

- How law effects security vs. security of law
 - how the law breaks
- Law is a collection of competing interests
- Romans tried to build rational law
- Leibniz tried again in the 17th C.
- Successfully reformed medieval law
- Still not truly logical

Law is Ugly

- Law is still ugly, by code standards
- The U.S. Code is tens of millions of words

- Why should hackers try?
 - Hubris
 - Systems are systems

Iceland is Pretty

...but it's got a smoking hole where its economy used to be.

- Began replacing constitution in 2010
- National Forum by lottery
- Constitutional Assembly began work in May
 - Agile process with week-long sprints
 - Running behind schedule
 - Comments via FaceBook and web forum

Icelandic Law is Odd

- Individual defense in court is taken seriously
- Literal interpretation of text beats case law
- Law becomes more code-like
- A constitution is self-contained and tractable
- Easier to analyze law with write access

How this Crazy Thing Started

- Met Smári McCarthy in October
- Real work started in December
- Started working in May
- 20-person hackathon this weekend
- Entirely unaffiliated amateur process

Four Part Project

- Translation
 - Textual Analysis
 - Design Review
 - Threat Modeling
-

Four Part Project

- Translation
 - Textual Analysis
 - Design Review
 - Threat Modeling
-

- Crowdsourcing an English translation
- External visibility
- Spanish, Greek, Arabic translations later

Four Part Project

- Translation
 - Textual Analysis
 - Design Review
 - Threat Modeling
-

- Complexity and reading level statistics
- Weasel words
- Boolean structure analysis
- Unbound variable checks
 - 19 terms in the current draft
- Higher-level ambiguous statements analysis
- Deconstruction into predicate phrases

Four Part Project

- Translation
 - Textual Analysis
 - Design Review
 - Threat Modeling
-

- Fast and expedient, but informal and limited

Four Part Project

- Translation
 - Textual Analysis
 - Design Review
 - Threat Modeling
-

- Constructing a formal threat model
- Built around work on the Trike project
- Most direct application of security techniques to law

The Trike Threat Modeling Method

- A tool for building formal models of processes and implementations
- Usually business processes and software
- Can be any systems with actors and assets
- Best tool for complex adversarial processes
- Makes smart people smarter

A Separation of Powers Bug

- Particular concern
- Three-branch parliamentary democracy
- Supreme court has seven members except when it has another eight
- Parliament gets to pick who supplements when ruling on constitutionality of law
- Encapsulates what TMs are good at

- Threat modeling uniquely suited to solving Leibniz's problem
- What other systems can we work on?
- Go break something different
